Scenario Overview

The heat stroke scenario simulates the body's temperature regulation system. This scenario highlights the ability of the Pulse physiology engine to simulate the energy exchange between the human body and the environment.

Base Physiology	Insults and injuries	Assessments	Interventions											
A 25 year old physically fit male.	Strenuous activity combined with over dressing leads to heat stroke.	Core Temperature Sweat Rate Heart Rate Complete Blood Count Metabolic Panel?	Active Cooling IV Fluids											
Segment 0	Engine initialization period.	Scenario Narrat	ve											
Segment 1	man has decided to wear a th	ick jacket, heavy pants, and t eived exertion is 13 on the Bo	Carson to begin a recreational free climb. It is a chilly morning, and the hick socks. The terrain is steep and the man is excited to begin his org scale (0.5 on a 0-1 scale) during the hike to the rock formation. It											
Segment 2	The hiker takes a moment to rest. When the man arrives at the rock formation, he is so excited that he begins climbing without removing any clothing. He climbs as an intensity of 18 on the Borg scale (0.857 on a 0-1 scale). It takes him about 5 minutes to climb to the top of the rock formation. At the top of the rock formation the man becomes dizzy and sits down. A hiker at the top of the formation notices the man and offers assistance. The man explains that he had not had very much to eat or drink that morning and he thinks he may have overexerted himself during the climb. Then the climber passes out.													
Segment 2														
Segment 3	bystander removes some of the She measures the man's core	he man's clothing. Being a w temperature, and the result uffering from heat stroke. Sh	recognizes that something is wrong and takes action. First, the ell-prepared medic, the hiker has a small first responder kit with her. ant abnormally high temperture coupled with the loss of consciousness be begins active cooling using some instant cold packs from the kit,											
Segment 4	•	perature begins to decrease	transport the man to Evans Army Community Hospital. During toward normal. Upon arrival at the hospital, the ER physician orders a
